DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/01/2010 has been entered.

Allowable Subject Matter

2. Claims 1, 5, 7, 10, 13-23, 50, 54, 56, 59 and 62-69 are allowed.
3. The following is an examiner's statement of reasons for allowance:
4. Regarding claims 1 and 50, the prior art of record does not teach or suggest an apparatus or method for resin transfer molding comprising a molding device comprising an pair of dies and an intermediate die wherein the intermediate die comprises a groove on it's upper surface and a plurality of through holes which enable the die to inject thermosetting resin to a fiber substrate and wherein the lower die comprises a discharge groove which extends substantially over the entire circumference of the substrate and communicates with a vacuum suction discharge line which is nipped and sealed between the intermediate member and the lower die. The closest prior art of record is represented by Sekido and Advani. Sekido discloses a pair of dies along with resin injection port and vacuum application but fails to teach an intermediate member

having grooves. Advani discloses an RTM device comprising an intermediate member having grooves for injecting resin and grooves for resin discharge. Both grooves are formed on the upper surface of the intermediate member to allow for valve control. It would not have been obvious to a person of ordinary skill in the art to modify the discharge groove to be a circumferential groove on the lower die as such would prevent valve operation intended by Advani.

5. Regarding claims 10 and 59, the prior art of record does not teach a RTM method/device comprising a plurality of dies and an intermediate member wherein the intermediate member has a plurality of through holes for delivering resin, a groove having depth of 3-5mm for a resin path is formed on a die facing the intermediate member, and a gap is formed in a range of 1 to 10mm. Sekido does not disclose an intermediate member. Oki and Johnson fail to disclose a combined grooved die perforated intermediate member having the claimed arrangement, groove depth and gap spacing.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
